FOR PLANT AND TRAINING MANAGERS · BATON ROUGE, LOUISIANA

Train your people on the hard day, on your own site.

The Southern University Mobile CAVE is a transportable, interactive 3D training room built by students and outfitted by industry experts. It comes to you. Your people do the task, see the result, and do it again.

THE PROBLEM

Training costs production, and the day that matters is the one you cannot rehearse.

- Classes pull workers off the line.
- Real equipment is risky for beginners.
- Emergencies are rare, so crews seldom practice them.
- Training centers mean travel and time.

WHAT CHANGES

Practice that fits a shift change.

- The unit parks at your site.
- Learners make the mistake in simulation, not on the floor.
- Run a drill as often as needed. Nothing is at risk.
- One vehicle serves many sites, so the cost spreads across every learner.

1. Do
Step into the scenario and act.

2. See the result
The room responds right away.

3. Debrief
An instructor replays the moment.

4. Repeat
Run it again, harder or different.

THE 20-MINUTE DEMO

What happens at your site.

- We ask what stops you from training more people.
- Your trainer and two or three of your people try a scenario.
- We debrief together and agree on one scenario worth building for your crew.

THE PILOT

One team, one scenario, one measured result.

- You choose the team and the skill.
- We agree on what to measure before we start.
- We report what happened, good or not.

What the research says, and its limits. A PwC study found VR learners trained up to 4 times faster and were up to 275% more confident. VR content costs more to build, and breaks even with classroom training at 375 learners. The study covered a leadership course for new managers, and PwC calls the figures estimates. It is not a plant study. Louisiana's industrial sector needs up to 5,400 more workers in the New Orleans, Baton Rouge and Lake Charles area (BIC Magazine, December 2023).

FIELDS ON THE TRUCK

Eight, per Southern University.

K-12 education · crisis management · emergency preparedness · healthcare · technology · exploratory research · manufacturing technologies · drone exploration. Scenarios are built or licensed with you before your demo.

GRAND OPENING

November 19, 2026.

Southern University, Baton Rouge, Louisiana.
